Extend

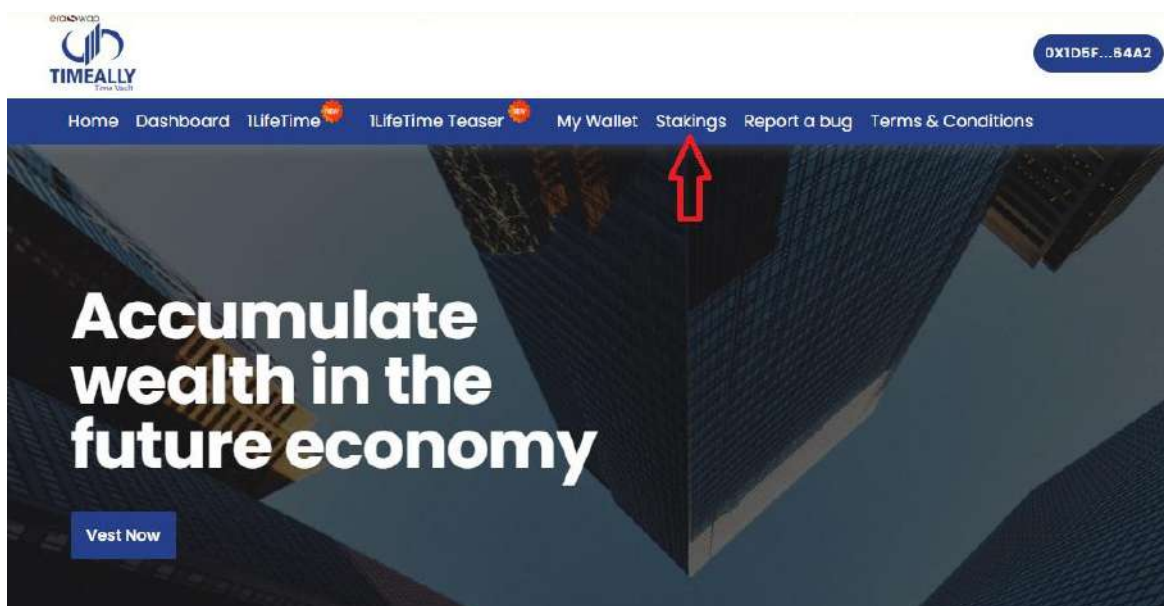

To retain efficiency on Blockchain, stakings data is mapped for upto 12 NRT Months for receiving NRT rewards. You only need to press the below button once or more times every year. It will extend your staking expiry for next 12 NRT months. If you do not extend your staking before the expiry (within 12 NRT months), it you will not be able to extend it after that, and you will stop receiving NRT rewards or will be able to delegate (basically, it will render useless). So simply press the below button, once in a year or more times as per your wish.

Split

You can split the your staking in to two stakings. When splitting, there are two kinds on contracts, master and child. The contract which is used to create a split is master staking contract and the new contract which is created is called child staking contract. When child splits from master, it takes proportional IssTime with it however all the unclaimed rewards stay with the master. You should not have delegation when you are splitting. Child is a new staking contract that is deployed which starts to get NRT rewards from next month.

Enter value of child split **Split Staking**

Merge

You can merge a staking into other staking. When a merge is taking place, there is a slave contract and a master contract. Slave contract merges inside master by transferring its principal amount and issTime to the master contract. After the transfer, the slave contract gets destroyed.

Please withdraw all your monthly NRT rewards on this staking since monthly NRT rewards are not included during a staking merge, if you do not withdraw them before merging, those rewards will be lost forever.
